

# XML DRILLDOWN

## Setting 'classify' Policy

---

Classify policy should be set for those tags for which menus should be generated.

```
<part>
    <location>//document/spectags</location>
    <policy>index=classify</policy>
</part>
```

Policy schema should be set before indexing data.

## Document import

---

Once you have set policy schema you can import documents into storage.

```
<document>
    <id>3049223</id>
    <title>Article</title>
    <text>This is article</text>
    <spectags>
        <type>Comment</type>
        <author>John Smith</author>
    </spectags>
</document>
```

Note that subtags of type or author also can be included to enable multi-level navigation.

## Menu generation

---

Within search requests content tag supply menu tag which identifies XPath location relative to the tag for which classify policy is defined of the tag for which to generate menu with hit distribution. Note that menu is generated along with search query and represents number of hits.

```
<siets:command>search</siets:command>
<siets:content>
    <query>article</query>
    <menu>type</menu>
</siets:content>
```

The response returned contains following reply:

```
<siets:content>
    <menu>
        <item hits="25">News item</item>
        <item hits="95">Comment</item>
        <item hits="7">Question</item>
        <item hits="7">Reply</item>
    </menu>
</siets:content>
```
